This data was collected by Radon Detection Specialists, Inc. and the members of the RDS Network between June 1999 and July 31, 2011. It is intended for general reference only and cannot be used to predict the radon level in a home in any town. The data collected represents more than 30,000 tests and does not contain invalid or post-mitigation test results. In unincorporated areas and in areas where town names and zip codes overlap, you should consider data from neighboring communities.

This data was collected by Radon Detection Specialists, Inc. and the members of the RDS Network between June 1999 and July 31, 2011. It is intended for general reference only and cannot be used to predict the radon level in a home in any town. The data collected represents more than 30,000 tests and does not contain invalid or post-mitigation test results. In unincorporated areas and in areas where town names and zip codes overlap, you should consider data from neighboring communities.
